

Template Integrations lets you make tasks available for use with InEight Change and other products. It also allows you to create an issue from Compliance or Completions to Change.

Integration title	Template name	Module	Category	Associated products
☐ Change Task	Change Task2	Change	Standard	Change
☐ Change Task Integration Template	Task for Mobile	Change	Task	Change
☐ Change Task Integration T				

Module Management – Email Notifications (Test Environments Only)

This setting is enabled by default. If disabled, all email notifications are suppressed for Compliance and Completions and no emails are sent to users, regardless of role, category, or form/task configuration.

⚠ This capability is intended strictly for TST (test) environments and must never be disabled or modified in production environments.

It is used when a production environment is copied to a lower environment, where in-progress forms, tasks, and events may already exist. Suppressing notifications prevents unintended emails and overdue alerts from being triggered as a result of copied production data.

This setting is accessible to L3 Administrators only.

Module Management indicates the different module tiles your company is using. The ITP toggle turns on/off the modules related ITP screens.
